

HMRG-150

First **A+** rated counter
in the market

In today's scenario, refrigeration equipment must be **more efficient** and **sustainable**, with **lower electricity consumption** and more **environmentally friendly** refrigerants, innovations that **should not have an impact on the final user experience**.

As a result of this line of work, we have developed and put on the market, the first GN 1/1 refrigerated counter with **A+** classification

High performance and reduced variations in temperature by the air circulation system, 40°C which maintains temperature values in those "heavy duty" units, climate class rated **5**

Energy efficiency when 24/7 units are used, class **A+** and **A** makes a real difference to your energy bill, saving of up to **80%**

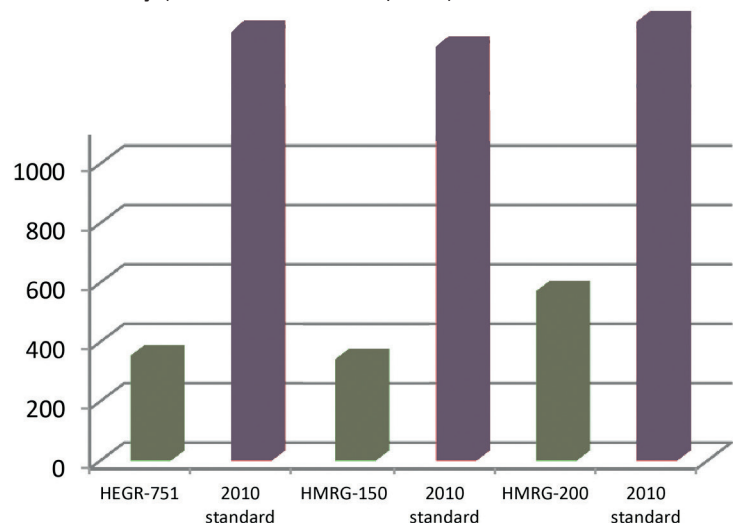

Efficient & eco-friendly using hydrocarbon gas that are not harmful to the ozone layer and do not contribute to the greenhouse effect (GWP) or ozone depletion (ODP)

R290 and **Cyclopentane** gas, improves cooling capacity and makes the insulation more efficient, reducing environmental impact.

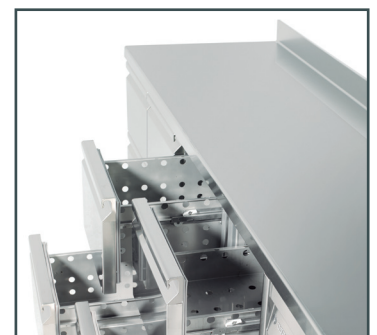

Smart digital controller set the automatic defrost which takes only as long as absolutely necessary.

Customization by choosing from numerous options such as drawers, worktops, feets, castors, sinks, locks, etc ...

Profitability (70% less consumption)

Sustainability (environmental rules compliance)
